Subject: My scientific findings

The Hague, **29 September 2011**

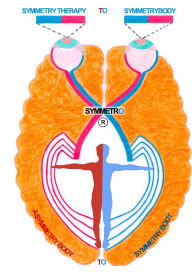

Dear Mrs Schippers,

Regarding the letter of **30 July 2009** with our reference **CZ/TSZ-2947483** and the letter of 22 September 2011 to the scientific editor of among others De Volkskrant, NRC, Trouw and Elsevier I advise you to first read my letter and then store it safely in a golden safe. I further advise worldwide medical specialists in ophthalmology to no longer carry out surgery for strabismus, as it is no longer necessary.

Yours sincerely,

SYMMETRYBODY

Subject: **amputation, e.g. of arms, legs, breast**

Date: **13 October 2011**

Dear Dr. Korrf de Gidst,

Some time ago, I borrowed a book from the public library in The Hague. The book was about breast cancer and I just wanted to leaf through it. The book contained patients' reports and how they felt before their surgeries. At one point I noticed, completely unexpected, how while reading, the tears were running down my face. One patient said she took her husband and a glass of wine into the bathroom to say goodbye to her breasts by candle light. The next day she had surgery.

I started cycling at fourteen. I also had the desire to become mayor of a city and build lots of cycling paths. When I happened to be in the Netherlands a while later, I was greatly surprised to see: cycling paths do exist!

About fourteen years ago, I saw a cyclist in the dunes. He dismounted and began to pick wild fruit. Some time later, he was disabled and rode a disability scooter. After some time I saw he had his leg amputated. I often see him looking at cyclists from his scooter so he can see them better. But he looks at the sky, the trees, the road, the people, the birds with great sadness - and he is hoping that his life will be over soon. It depresses me that I cannot do anything to help him, but with my plans for this world, I can fully guarantee that the next generation of people will be the healthiest generation that has ever lived on this planet. With **SYMMETRYBODY**, the necessity to amputate will be a thing of the past.

I have prepared programmes all by myself that allow me to start 300 international projects worldwide that will guarantee the cure of over 200 diseases.

Yours sincerely,

SYMMETRYBODY

Subject: **Dynamic response, stop project**

Date: **13 October 11**

Honourable Mr Van Gijzel „chairman of Brains Unlimited”

While browsing the Internet, I came across someone in the centre of Europe who suited my subjects Brains Unlimited. I have viewed the video several times and paid special attention to the passages where you were explaining. Your language, your words and concepts are powerful, perceptive and very detailed. I have listened to it over and over again. If there had been any national elections, I would have voted for you as Prime Minister.

We want to resume the chosen paths of the past and the way we used to think and act. That, however, is completely insufficient to find answers to the questions of tomorrow.

We will need to become different, better, faster and more dynamic to be able to face tomorrow's challenges.

I was forced to make the dynamic responses you are looking for public five years ago. I have waited a long time to open my mouth.

It may sound odd, but as a child I used to dream of becoming mayor. Cycling was one of my favourite pastimes. In my homeland - far away from Europe - there were no cycling paths, and I wanted to take care of that later when I was mayor. What I did not know was that the concept of 'cycling paths' already existed in the Netherlands. I felt I had found a dynamic answer.

You are looking for dynamic responses to the cause of **diseases such as Alzheimer's, Parkinson's, epilepsy, schizophrenia and multiple sclerosis.**

I have been searching for and finding dynamic answers my whole life now. Therefore I have scientifically demonstrated that our bodies are 'out of symmetry' (**ASYMMETRYBODY**) and what a strain this puts on our brain. Or, more positively formulated: the more symmetry our Body is (**SYMMETRYBODY**), the better and healthier our brain functions.

Right... Here in the Netherlands I have my cycling paths. So there is no need for

me to become mayor anymore. And you have acquired my dynamic response to numerous costly health problems.

From my professional capacity, I advise you to cancel the Brains Unlimited project. It appears to me that you are carrying coals to Newcastle.

The good news is that you too can become "SYMMETRYBODY" in the future.

Yours sincerely,

SYMMETRYBODY

Subject: **the cause of**
eye diseases a to z

Date: **26 October 2011**

Dear Professor J.R. Vingerling,

On 22 October 2011 at 11 pm, I have sent you an email. The reason is your interest in the causes of eye diseases, and your appeal to countries such as the U.S.A., Singapore, Australia and China to join forces when it comes to eye diseases (25 March 2011). There is great interest for everything to do with our eyes; a very precious organ.

Your colleagues Dr. Nicole Naus, Dr. Emine Kilic with Dion Paridaens, Annelies de Klein, Dr. Robert Kuijpers, Tom Misotten, Seerp Baarma, Martin Hagen, Prof. Huib Simonsz, Radboud Hospital, etc. have also called for more co-operation.

Some time ago, I travelling by train to go sporting. Suddenly, I noticed that I was sitting next to a blind and desperate man. It was quite by accident. My first question to him was: "Sir, what do you wish for?" The man said: "Well..., I am counting down the days, waiting for the end." I then asked him why. He told me that he suddenly became blind ten years ago. I gave him a sign and the firm hope that he would regain his eye sight back. Then I saw a smile appear on his face.

On the spot, I examined the iris, pupil and cornea of the blind man. His nasolacrimal duct appeared to function normally. Unfortunately, the man soon had to get off the train when it reached his destination. Because I was distracting him, he forgot to take his bag. So I jumped after him with his bag causing me to almost miss the train.

What I often do is walking behind blind people or looking deep into their eyes. I take pictures that I enlarge at home and study carefully. That is more useful, cheaper and easier than an MRI scan. Currently, I can explain within fifteen minutes why the eyes lost their sight and go blind and, more importantly, how one can regain their eye

sight. Is not that priceless? Is that not brilliant? This is a revolution within the medical world - exactly what you wanted.

In addition, I can explain all the causes of eye diseases from a to z in a short lecture and in a way that can be easily understood.

I explain for example how the medial m.rectus and lateral m.rectus work [how are the optic chiasm, lateral geniculate corpus blocked], how we control our fibres, **why people suffer from strabismus or keratoconus, cataract, glaucoma, macular degeneration and what causes blindness**. People can train the accommodation capacity of their eyes themselves. That has nothing to do with age. Until the end of a lifetime, people can retain their sharp and clear eyesight. Artificial lenses will become completely redundant in the future.

Firstly, I would advise you to immediately cancel performing surgery for strabismus, because this is a very severe and unnecessary procedure performed on our most precious organ.

Secondly, it is no longer necessary to perform a lens implant to treat cataracts depending on the age of the patient. In 15 to 20 years this surgery will most certainly no longer be necessary, because the next generation will be the happiest people who have ever lived on earth.

Thirdly, I recommend not to perform lens implants for cataracts in young people. Strabismus and cataracts can fully recover by doing specific and especially designed movements I developed

A healthy brain in a healthy body.

Yours faithfully,

SYMMETRYBODY

Subject: registration

Date: **19 November 2011**

Dear M. Prof. dr. Han van Krieken

Recording data as a property is important for the medical world. Registration requires time and money with additional stress when you discover something. Registration is the second passport of a person, that remains valid for a lifetime. On the day you say your final goodbyes to this world, the name of that person is engraved in people's memory for good. That is the meaning of a good registration as a second passport! Many people search a name and only then start their research. Others conduct research first and register afterwards.

Ok, now we have reached my story. I was active in scientific movement research for more than eleven years, based on my own ability and concept. I finished that research in 2009 and the result is a "revolution in the medical world".

The patient can maintain clear and sharp vision by making specific movements. [That means that many blind people can see the world,](#) nature, people, animals and the sea again. The next generation will be the happiest ever in this world. There is a great possibility that some people will no longer need glasses. In other words: I have the explanation and the successful treatment of ophthalmologic diseases, and the cause of cancer too.

The best outcome of my long research is that I have found the cause of more than two hundred diseases. My scientific findings, however, remain the explanation and treatment of ophthalmologic diseases and the explanation of cancer. That is registration and as long as you live, I will remain in your memory. You can invite me for a short five minutes' lecture. I don't need longer. Our Minister of Public Health, Wellbeing and Sports is already familiar with my concept.

Yours sincerely,

Giovanni Tavakolli

Subject: Cancel surgery for strabismus
Breast amputation
Breast correction
lens implant etc

Date: **13-03-13**

Very Honourable Sir,

I have sent letters about my scientific movement research to our Minister of Public Health, Wellbeing and Sports since 2009. I explained in those letters that I have brought many changes to this world. In a first reply to my letters I was advised to get in touch with ZonMw.nl. Unfortunately I was not treated appropriately by Mrs. Simone Korff de Gidst (ZonMw.nl) and was sent from pillar to post.

The purpose of the contact was for her to stop surgical interventions for strabismus at global level and with immediate effect. Such operations are very heavy for children.

On 26 October 2011 I sent a letter to professor dr. J.R. Vingerling and his colleagues, in which I wrote the following:

- Firstly, I advise to stop surgical interventions for strabismus with immediate effect. Such an operation is a heavy intervention for the eyes - the major human organ.
- Secondly, it is no longer necessary to carry out a lens implant for cataract, depending on the patient's age. In 15 to 20 years that operation will surely no longer be needed, because the next generation will be the luckiest people to have ever lived on earth.
- Thirdly, I advise to no longer implant lenses in young people to remedy cataract. Eye conditions like strabismus and cataracts can completely recover with specific movements I developed.

I have made many attempts in the past to bring eye specialists and oncologists to the meeting table, but they bury their head in the sand and are ashamed to contact me.

I have also sent a large number of letters to the World Health Organisation (WHO), the Lancet and the Dutch scientific publications. I never received a reply.

I therefore today contact you, because with your co-operation I wish to submit my complaints about the rejection of my scientific movementresearch to Mrs. Margaret Chan, CEO of the WHO. I would rather see her sitting around the table in the court at the Hague with the major professors in this world. One of the subjects of debate should then be that the Oncology book by G.J.H. van de Velde, J.H.M. van Krieken, P.H.M. de Mulder and J.B. Vermorken (ISBN 978 90 313 41 771) is no longer relevant. Currently the greatest victims of unnecessary medical interventions unfortunately are young people and women.

Students who later become physicians or specialists actually are innocent, as they have gathered their knowledge based on incorrect medical literature and reference books. As long as nothing changes, an international suspension for medical faculties of five years must be defined.

I achieved that insight after years of technical and scientific studies, physiological sport training and design activities. This provided me with a deep insight in the functioning of the human body and the mobility system

I have collected the necessary scientific knowledge and insight - among others - as a fashion designer, technical lecturer, in industry and commercial cold engineering, sport training, biomechanics, and through independent study in eye surgery and oncology. My older brother assisted me with all his scientific expertise in physics and that has made me accurate, attentive and disciplined. He spent effort and time on his students, which enabled him to not only achieve social results but he also supplied top academics. His knowledge and dedication therefore also contributed to the success of our method.

I enclose a copy of my scientific movementresearch : SYMMETRYBODY and results, with the letters [\[82\]](#) I have written as annexes.

Yours sincerely,

Giovanni Tavakolli

Subject: **Visual impairment & Blindness,**
International Investment

Date 27-09-13

His excellency minister president Barack Obama,

Symmetrybody, dedicated to improve the health of people of all ages and classes, has been established by me in **1971** Now, I would like to establish my company symmetrybody in the United States of America. It would enable people to become acquainted with my revolutionary method that can bring Body into symmetrybody in a natural way "without surgery". My revolutionary method will cure all eye problems. My success has been so great that I can safely say (if the eyes have not bulged) that blind people who bring their Body into symmetrybody, have a 80% chance to see the blue sky, birds and nature in all their glory once again.

As history shows, blind people have been seriously neglected by society. Firstly because professors in ophthalmology have (had) no insight into their condition and secondly, because they are labeled as a 'forgotten' group. The costs of a guide dog, specially designed traffic lights, special tiles on the pavement, special need interior design at home will considerably decrease and, of course, the distress of the person in question (and their family) will be eased if people are given the opportunity to choose my treatment. Therefore, I would like to spend the first two years of treatment focusing on treating young blind people (under thirty). I would like to develop this successful treatment before taking it to an international level (all countries). Of course, I cannot proceed without help and investment.

Generally speaking, symmetrybody is the future in this world for the poor, middle class and rich alike.

For further consideration and interviews, I am in a position to visit the U.S. ambassador in The Hague, to ensure I can quickly move to the United States. I enclose a copy of my website with all its content with this letter.

Yours sincerely,

Giovanni Tavakolli,

The united State of America

Subject: Cancer Moonshot Summit, your son, educate me

Date: 18-08-2016

His excellency, Vice President Joe *Joseph Robinette* Biden

it is a great pleasure for me to write this letter to you.

Since December 2012, I visit the website of The White House regularly and sometimes watch your video about the political activities of president Barak Obama. Your words are always powerful, clear to feel, experience and to understand.

The issue of cancer of your son *Beau* was very painful and that brought tears in my eyes, when studying your family history, I can easily understand, that your live is hard struggling, pain and with different horror situation.

One of the best videos [37:27 minute] of you is on June 29, 2016: Delivers Remarks at the Cancer Moonshot Summit, i watched and repeated them more than three times, because the capacity of your words is very sharp to the world of intellectual people not only in The United State of America, but around the World, for much more attention and to finish the fundament-name of cancers disabilities, i'm agree with your powerful words.

In the end of your video *Cancer Moonshot Summit on June 29, 2016* you asked everyone to teach or educate you regarding cancer treatment, and i am the best and can seriously and boldly educate you to learn why your son *Beau* had brain cancer and what would have the best treatment for him or the people with the same problem.

Below are more than 5 reason why you will be support me:

My talent is that I recover 98 % skin cancer [psoriasis, eczema, vitiligo], chronic blood cancer. After my concept i grantee a healthy brain, eye, heart and lung to the age of 120 years old. The big news is, that a long time ago i have already changed the fundament name of cancer, it gives me a great pleasure.

I hoop to see you as soon as possible.

Yours sincerely,

Giovanni Tavakolli,
